

How To Install Bowl & Stand Feature

Firstly make sure that the ground is level. This will ensure that reservoir sits flat & the water feature flows evenly.

- Rest the reservoir on the leveled ground.
- Place the pump in the reservoir, and thread the electrical cable through the hole on the side of the reservoir (#1 - circled in yellow).
- Sit the Sub Base in the middle of the reservoir, and place your feature on top of the sub base.
- Connect the flexi hose to the hard pipe (#2 - circled in yellow) at the base of the bowl and thread it through the stand & sub base.
- Connect the flexi hose to your pump (#3 - circled in yellow).
- Cut the flexi hose to length and slide the pump under the sub base.

Fill the reservoir with water and switch on your pump!

Tips:

- Connect the flexi hose to the bowl before placing it on the stand.
- Make sure there are no bends in the hose, as this could result in restricted water flow.
- Allow about 300mm of electrical cable inside the reservoir, so that the pump is easily accessible for maintenance.
